

Cedrus deodara 'Aurea'

Magasság	15 - 20 (30) m
Szélesség	6-10m
Korona	broad pyramidal when young, later broad, flattened, corymbose, dark, dense crown
Kéreg és ágak	first grey and smooth, later becoming rough
Leaf	needles in bundles, yellow to greenish yellow, 2,5 - 5 cm , evergreen
Virágok	unremarkable, fragrant flowers
Gyümölcsök	reddish brown cones, 8 - 12 cm, 1 to 2 together
Tüskés/tövises	egyik sem
Mérgező tulajdonság	rendszerint nem mérgező emberek, (nagytestű) háziállatok és használatok számára
Talajtípus	nutrient-rich, well-permeable, acidic soils
Ültetési hely követelményei	Nem viseli el az útburkolatokat
télállóság	7b (-14,9 és -12,3 °C)
Szélellenállóság	moderate
Alkalmazások	sugárutak és széles utcák, ipari terület
Forma	specimen conifer
Eredet	England, 1866

This cultivar grows somewhat more slowly than the species and has one main trunk that grows straight with lateral branches and twigs that hang off at the end. As a result, the tree, particularly when young, develops a decorative crown shape that is at first broad and pyramidal, but later flattens out as it grows. Depending on the site of the tree, its height is 15 - 30 m. The needles grow in groups, with up to 30 bundled together. First they are yellow, but later they turn greenish yellow. The ovoid, upright cones grow singly or in pairs and have a round top. When planted, young trees are particularly sensitive to frost, requiring a site sheltered from wind. 'Aurea' likes light, but not direct sun. It is somewhat more sensitive to frost than the species and does not thrive well in high-pH soil.
