

Sequoiadendron giganteum

'Barabits Requiem'

Magasság	approx. 15 m
Szélesség	3-4m
Korona	broadly weeping, very irregular, light, open crown, capricious growing
Kéreg és ágak	reddish brown and soft, fibrous trunk, deeply grooved
Leaf	needles scaly and sharp, bluish green, 1 - 1.2 cm, evergreen
Virágok	unremarkable
Gyümölcsök	upright cones, hanging when ripe, reddish brown, 5 - 8 cm
Tüskés/tövises	egyik sem
Mérgező tulajdonság	rendszerint nem mérgező emberek, (nagytestű) háziállatok és haszonállatok számára
Talajtípus	all, preferably nutrient
Talajnedvesség	Nedves talajon használható
Ültetési hely követelményei	Nem viseli el az útburkolatokat
télállóság	7a (-17,7 és -15,0 °C)
Szélellenállóság	moderate
Alkalmazások	kiskert, zárt kertek
Forma	magas törzsű fa, specimen conifer
Eredet	M. Barabits, Sopron, Hungary, approximately 1970

A conifer with a bizarre growth pattern, with branches hanging down sharply, but some grow in a more or less horizontal, undulating pattern. These branches have twigs that hang straight down. The main trunk sometimes grows in an undulating fashion as well. This ultimately produces an exceptional, irregular growth pattern that is pre-eminently suited for solitary planting. The growth pattern is quite similar to that of the cultivar 'Pendulum', however the branches of 'Barabits Requiem' grow more sideways. Height approx. 15 m and width 3 - 4 m. Overfertilisation caused the loss of the original parent tree, discovered by M. Barabits of Sopron, Hungary. Luckily, a few grafting plants were spared, which is why they were named 'Barabits Requiem'. This cultivar is stronger than 'Pendulum' in all respects. The tree is difficult to transplant.
