

Amelanchier canadensis 'Rainbow Pillar'

Magasság	3 – 6 m
Szélesség	1-2m
Korona	vase-shaped, half-open crown
Kéreg és ágak	twigs brown: bark grey-brown, smooth
Leaf	ovoid, 4-5 cm long, medium green, autumn color red
Őszi színek	narancs, piros
Virágok	in somewhat upright clusters, 5-8cm long, white flowers in April-May
Gyümölcsök	berry-like pome fruit, round, about 8 mm long and 1 cm wide, purplish red
Tüskés/tövises	egyik sem
Mérgező tulajdonság	rendszerint nem mérgező emberek, (nagytestű) háziállatok és haszonállatok számára
Talajtípus	makes very few demands on the soil, prefers calcareous soil
Ültetési hely követelményei	Elviseli a laza útburkolatot
télállóság	4 (-34,4 és -28,9 °C)
Szélellenállóság	good
Egyéb tűrőképességek	fagytüró (télállósági fok: 1-6), széltüró
Alkalmazások	faültető edények, tetőkeretek, kiskert, zárt kertek
Forma	magas törzsű fa

Amelanchier canadensis 'Rainbow Pillar' is a large shrub, growing into a small tree with a densely branched vase-shaped crown to about 6 m. The twigs and bark are unremarkable. The leaves unfurl green and are then slightly hairy. The summer leaves are also green, but hairless. Autumn colour is, as with many Amelanchier, brilliant red. Pure white flowers open in early spring. These are in up to 8 cm long, upright clusters. The individual flowers are over 1.5 cm in diameter. The petals of A. canadensis are more regularly shaped and broader than those of A. lamarckii. The flowers are followed by berry-like achenes that ripen in late June-early July. The fruits are purplish-red and covered with a thin layer of wax. Usually RAINBOW PILLAR produces few fruits, at most only a few per cluster. Because of its small size, the tree is ideally suited to small-scale projects and application in narrow profiles. RAINBOW PILLAR grows in any type of soil, provided it is sufficiently permeable. Although the tree will also grow in more acidic soils, calcareous soil is recommended for optimal results. Was found as a seedling from A. canadensis, where the plant stood out for its more upright growth habit and dense branching.
