

## Euptelea pleiosperma

|                             |                                                                                   |
|-----------------------------|-----------------------------------------------------------------------------------|
| Magasság                    | 5 - 10 m                                                                          |
| Szélesség                   | 5-10m                                                                             |
| Korona                      | obovoid to broad vase-shaped, half-open crown                                     |
| Kéreg és ágak               | young twigs chestnut brown, bark dark grey-brown                                  |
| Leaf                        | broad oval, tip long and tapering, margin double serrated, dark green, 5 - 10 cm  |
| Őszi színek                 | piros, lila                                                                       |
| Virágok                     | in clusters, without petals or sepals, stamens red, march/april                   |
| Gyümölcsök                  | winged all round, spatulate, light red, about 1.3 cm                              |
| Tüskés/tövises              | egyik sem                                                                         |
| Mérgező tulajdonság         | rendszerint nem mérgező emberek, (nagytestű) háziállatok és haszonállatok számára |
| Talajtípus                  | fertile, moist but well-drained soil                                              |
| Ültetési hely követelményei | Nem viseli el az útburkolatokat                                                   |
| télállóság                  | 7 (-17,7 és -12,3 °C)                                                             |
| Szélellenállóság            | moderate                                                                          |
| Alkalmazások                | kiskert                                                                           |
| Forma                       | magas törzsű fa                                                                   |
| Eredet                      | Western China                                                                     |

Small to medium size, usually multi-stemmed tree with a vase-shaped crown. The chestnut brown young twigs bear attractively shaped, broad ovate leaves with double serrated margins and a long, tapering tip. Young leaves greenish brown to bronze, mature leaf dark green. The autumn colour can be dark purplish red. Blossoming comes before the leaf development. The flowers have no petals or sepals, consisting only of clusters of red stamens and light green pistils. The light red fruits are winged all round. Each fruit, containing one to three seeds, is about 1.3 cm in size and hangs on a stalk 2 - 5 cm long. Grows on any soil except limy, if sufficiently fertile. The soil must be sufficiently moist but well-drained. By preference, plant in a fairly sheltered position.
