

## Nothofagus obliqua

<b>Magasság</b>	approx. 30 m
<b>Szélesség</b>	12-16m
<b>Korona</b>	oval, half-open crown, capricious growing
<b>Kéreg és ágak</b>	grey-brown bark, smooth, later flaking off in plates
<b>Leaf</b>	elongated ovoid, dark green, 3-7 cm
<b>Őszi színek</b>	sárga, piros
<b>Virágok</b>	unremarkable, greenish-yellow, May
<b>Gyümölcsök</b>	unremarkable nutlets, approx. 1 cm long, 3 per cupule
<b>Tüskés/tövisek</b>	egyk sem
<b>Mérgező tulajdonság</b>	rendszerint nem mérgező emberek, (nagytestű) háziállatok és haszonállatok számára
<b>Talajtípus</b>	all types, preferably not too dry
<b>Ültetési hely követelményei</b>	Nem viseli el az útburkolatokat
<b>télállóság</b>	8 (-12,2 és -6,7 °C)
<b>Szélellenállóság</b>	moderate
<b>Forma</b>	magas törzsű fa, többtörzsű fa
<b>Eredet</b>	Chile

The short and somewhat overhanging branches give this tree an ascending oval crown. From being a shrub it often grows to become a tree, usually multi-trunked. It is a fast grower in its home country (Chile) and is an important producer of timber. The reddish-coloured wood resembles oak and is frequently used for furniture. The greyish-brown bark on old trunks remains smooth for a long time but eventually flakes off in long irregular plates. The bare, dark brown twigs have elongated ovoid and glossy leaves with a blue-green underside. They have a serrated leaf edge and turn to red and yellow in the autumn. The tree has a deeply penetrating tap root with many branches. *Nothofagus obliqua* really loves heat and requires a sheltered site to protect it from cold winters. Despite the risk of frost damage, the tree always emerges vigorously every year.
