

Tetradium daniellii var. hupehensis

Magasság	10 - 20 m
Szélesség	8-12m
Korona	broad fan-shaped, half-open crown, capricious growing
Kéreg és ágak	grey, smooth bark, twigs olive green, velvety grey hair
Leaf	imparipinnate, with 5 - 9 leaf segments, dark green, 20 - 35 cm, feathered leaf
Virágok	small white flowers in broad pyramidal plumes, June/July, fragrant flowers
Gyümölcsök	clearly rostrate fruit, reddish purple to black, Ø 0.8 - 1 cm
Tüskés/tövises	egyik sem
Mérgező tulajdonság	rendszerint nem mérgező emberek, (nagytestű) háziállatok és haszonállatok számára
Talajtípus	well-permeable, rich in humus, not too wet
Ültetési hely követelményei	Nem viseli el az útburkolatokat
télállóság	7a (-17,7 és -15,0 °C)
Szélellenállóság	moderate
Fauna fák	gazdanövény pillangók számára
Alkalmazások	faültető edények
Forma	magas törzsű fa, többtörzsű fa
Eredet	Central China
Szinonimák	Euodia hupehensis

Fast-growing solitary tree with a semi-open, broad, fan-shaped crown on a short trunk. The smooth bark is dark grey and has lenticels. Twigs are olive green, with velvety hair, and have small, whitish lenticels. They turn greyish brown the second year. The imparipinnate leaves consist of 5 - 9 opposed leaf segments and are 20 – 35 cm long. Each leaflet is ovoid and tapers to a point, 5 -12 cm long with a short stem. The upper side of the leaf is dark green while the underside is light green. Aromatic white flowers, each 0.3 – 0.5 cm, grow in broad, pyramidal plumes of 10 – 15 cm. Reddish purple to black fruit appears after flowering. For a long time, this tree was known as *Euodia hupehensis*, but now it is considered a variety of *T. daniellii*. *Tetradium daniellii* var. *hupehensis* is a tree valued for its abundant summer flowers and the decorative dark-coloured fruits that appear in the autumn.
