

## Ziziphus jujuba

|                                    |  |
|------------------------------------|--|
| <b>Magasság</b>                    | 8 - 10 m   |
| <b>Szélesség</b>                   | 6-8m   |
| <b>Korona</b>                      | round, half-open crown, capricious growing   |
| <b>Kéreg és ágak</b>               | twigs zigzag, thorny, bark dark grey-brown   |
| <b>Leaf</b>                        | elliptical to oval-elongated, with three main veins, glossy green, 2- 7 cm                 |
| <b>Virágok</b>                     | in axillary pairs or clusters of 3, yellow, April/May                                      |
| <b>Gyümölcsök</b>                  | fleshy drupe, oval-elongated, 1.5 - 2.5 cm, dark red to black-brown, edible, edible fruits |
| <b>Tüskés/tövisek</b>              | igen   |
| <b>Mérgező tulajdonság</b>         | rendszerint nem mérgező emberek, (nagytestű) háziállatok és haszonállatok számára          |
| <b>Talajtípus</b>                  | any well-drained soils, lightly acidic to limy, tolerates drought                          |
| <b>Talajnedvesség</b>              | Száraz talajon használható   |
| <b>Ültetési hely követelményei</b> | Elviseli a laza útburkolatot   |
| <b>télállóság</b>                  | 8 (-12,2 és -6,7 °C)   |
| <b>Szélellenállóság</b>            | good   |
| <b>Egyéb tűrőképességek</b>        | széltűrő   |
| <b>Alkalmazások</b>                | faültető edények, tetőkertek   |
| <b>Forma</b>                       | magas törzsű fa, többtörzsű fa   |
| <b>Eredet</b>                      | South-Eastern Europe to South and East Asia  |
| <b>Szinonimák</b>                  | Zizuphus zizyphus  |

Small to medium-size deciduous tree with a round, half-open crown growing to approx. 10 m. The young twigs are distinctly zigzag and with one or two thorns at the base of each leaf. If there is just one thorn it is straight and 3 cm long, a second thorn is bent and distinctly shorter. The flower shoots are not thorny. The mature bark is dark grey-brown and smooth. The elliptical to oval-elongated leaf is glossy dark green and has three distinct main veins. It is positioned in two rows along the zigzag twigs. It feels leathery and has a finely crenated margin. The yellow flowers open in pairs or in clusters of three in April and May. They are followed by fleshy drupes that vary in colour from red to black-brown. The fruit is edible and has been eaten in China since long before the Christian era. The limited winter hardiness means this tree is only suitable for mild climatic zones and in sheltered sites such as patios, atriums and courtyards.
