

## Staphylea trifolia

|                                    |                                                                                 |
|------------------------------------|---------------------------------------------------------------------------------|
| <b>Magasság</b>                    | 2-5 m                                                                           |
| <b>Szélesség</b>                   | 2-4m                                                                            |
| <b>Korona</b>                      | oval, later vase-shaped, half open crown                                        |
| <b>Kéreg és ágak</b>               | brown                                                                           |
| <b>Leaf</b>                        | green                                                                           |
| <b>Virágok</b>                     | creamy white to greenish white, flowers in May, fragrant flowers                |
| <b>Gyümölcsök</b>                  | yellow brown                                                                    |
| <b>Tüskés/tövises</b>              | egyik sem                                                                       |
| <b>Mérgező tulajdonság</b>         | rendszerint nem mérgező emberek, (nagytestű) háziállatok és használatok számára |
| <b>Talajtípus</b>                  | clayed soil, loamy soil, sandy soil, calcareous soil                            |
| <b>Ültetési hely követelményei</b> | Nem viseli el az útburkolatokat                                                 |
| <b>télállóság</b>                  | 5b (-26,0 és -23,4 °C)                                                          |
| <b>Szélellenállóság</b>            | fairly                                                                          |
| <b>Egyéb tűrőképességek</b>        | fagytűrő (télállósági fok: 1-6)                                                 |
| <b>Fauna fák</b>                   | fagytűrő (télállósági fok: 1-6), gazdanövény pillangók számára                  |
| <b>Alkalmazások</b>                | faültető edények, kiskert                                                       |
| <b>Forma</b>                       | többtörzsű fa                                                                   |
| <b>Eredet</b>                      | Eastern North America                                                           |

Staphylea trifolia is a large, multi-stemmed shrub, rarely a small tree, up to about 5 m high. The species grows distinctly upright and is quite narrow when young. Later, it widens and will develop a vase-shaped crown. The annual branches are yellow-green and initially hairy. The pale green leaf buds are always slightly angled upwards. The leaves are always trifoliate, with the top leaf having a remarkably long stalk. The upper side of the leaves is dark green, the underside is lighter and slightly downy-hairy. In May, the flowers open in nodding clusters. The individual flowers are greenish-white with pale green calyxes. The colour impression is greenish-white to cream. The flowers are followed by the typically inflated fruits characteristic of any Staphylea. In S. trifolia, they are 3-lobed and 3-4 cm long.

Staphylea trifolia grows naturally on moist riverbanks. It is a strong shrub that will grow well on any nutritious, sufficiently moist but permeable soil. It is a typical warm-season shrub that should preferably be planted in a sunny location.
